

**The Effective Therapy System**

Ranging from plastic surgery to fitness and wellness, today's huge aesthetic market is characterized by continuous change. Newly introduced products are most often labeled revolutionary. Big promises are made – unfortunately in many cases, little is substantiated. The success of your cosmetic practice, though, does not depend on slick advertising slogans, but on the effectiveness of products and therapies that you offer. Eventually the overall quality and more so the innovation of your services determine customer satisfaction in this changing environment. beautytek allows you to offer exactly these success factors: Unparalleled effectiveness in aesthetic treatment and competitive innovation.

**The beautytek Promise**

The innovative therapy forms of beautytek by medilab keep their promise: Excellent and long-lasting results in your daily routine cosmetics practice. The proof for this statement is incorporated into the beautytek system by documenting each therapy outcome with the integrated digital camera.

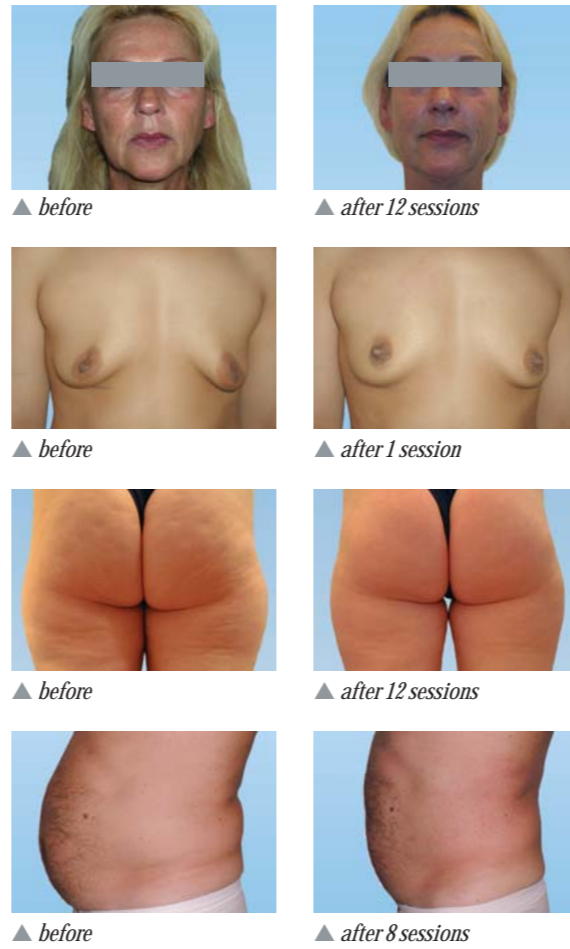

**Entirely Different Therapy Methods**

beautytek is hardly comparable with any other known conventional method. Its working principle is neither based on muscular HV-stimulation or ultrasound nor on laser or magnetic stimulation. Originally developed for applications in medicine, beautytek incorporates novel technology which has already proven its superiority in the medical field. Bio-cybernetic algorithms and artificial intelligence are applied by this ground-breaking system to both, analyze and enhance the physiological conditions of the treated tissue. As the ultimate therapeutic goal consists in reaching and maintaining an energetic balance, beautytek applies a closed circuit of gathering precise physical information about energetic deficits and transferring exactly determined doses of energy. Combining the wisdom of Traditional Chinese Medicine (TCM) with the most modern medical technology beautytek means a quantum leap in safety and efficacy of aesthetic therapy.

**The Better Treatment**

beautytek is non-invasive and absolutely painless – even relaxing and invigorating for the client. By using a computer program embedded in MS Windows® operation is simple and straight forward. Depending on the treated region and the physical conditions of the tissue, the operator is guided through the therapy step by step. Built around animated anatomical charts, a graphical user interface indicates the type and direction of probe application, leaving no room for variability, omission or error. The bio-cybernetic circuit prevents any over- or under-dosage. All relevant parameters are automatically optimized and adjusted by the computer; their effect being continuously monitored by analyzing tissue condition. Measurement, analysis, model optimization, and energy transfer happen in a fraction of a second, throughout the unique beautytek treatment cycle.

► With beautytek, your therapy success is preprogrammed!

**Renewed Beauty for your Client**

Besides its unequalled efficacy beautytek offers great versatility in treating all regions of the body where a visible and lasting modification is wanted. Highly effective therapy programs are available for all common problems, relieving both acute and chronic conditions. The beautytek-therapy shows particularly good results in

- Tissue tightening (face, breast, abdomen, legs and gluteus)
- Fat reduction and body shaping
- Cellulite
- Acne, scars, wrinkles and other skin modifications
- Pregnancy stretch marks
- Condition before and after plastic surgery

beautytek's reach is not limited to skin surface but unfolds its full therapeutic power by stimulating the self-repair mechanisms of the body. Advancing deep into the tissue, the precisely dosed energy transfer leads to a balanced tissue hydration, an equilibration of acid base status, opening of the lymphatic pathways, improved blood perfusion, and finally enhanced fat metabolism. beautytek therapy is simple for the therapist, yet highly sophisticated in its methods and bio-cybernetic procedures. Starting at programs for basic facial and body treatment, beautytek therapy forms encompass more specialized applications including the powerful Advanced Cellulite Treatment ACT. Typically, a therapeutic session will last 20 to 60 minutes. Therapy progress can be followed and verified by beautytek's digital imaging system.

**Medical Technology for Cosmetics**

Powerful computers and contemporary software systems have become an indispensable tool in modern medicine. Both the medical and cosmetic/aesthetic fields require the same high technical and methodological standards for achieving and maintaining superior therapy results. With beautytek, medilab introduces a computer-based system to the cosmetic world for the first time, employing bio-cybernetics and artificial intelligence. beautytek fills the gap between medical technology and aesthetic applications. The beautytek system comprises all components needed for effective treatment in the daily routine work of your beauty institute, including the integrated digital camera.

**Quality Comes First**

We demand the highest quality standards from our products and services. Consequently beautytek is manufactured and CE certified according to international medical norms. medilab is an ISO 9001 certified company adopting the most stringent quality assurance program with annual audits and re-certification. In our work we do not take chances. Customer satisfaction is our desire – and our pleasure.

► You can rely on us – and beautytek.

**Specifications / Equipment**

- ▶ 32 bit technology
- ▶ Premium PC system including Windows XP Professional
- ▶ Design cage in 3 colours to choose from
- ▶ Cantilever flat screen
- ▶ Wireless optical mouse and design keyboard
- ▶ Probes for face and body
- ▶ Foot switch
- ▶ Digital camera
- ▶ Double electrolyte starter kit
- ▶ Complete premium software package
- ▶ Premium marketing package
- ▶ XL training package
- ▶ 2 years premium warranty

**Physical Dimensions**

- ▶ Size (height x width x depth): 127 cm (incl. TFT-flatscreen) x 73 cm (incl. probe-holder) x 61 cm
- ▶ Weight: approx. 65 kg
- ▶ Power supply: 220-240 V, 50 Hz
